

Less leaks, more savings

DTE

Every compressed air system has leaks, but do you know what the effects are? Systems with compressed air leaks can negatively affect system capacity and production and use unnecessary energy. The DTE Energy Find and Fix[®] Compressed Air Program provides financial incentives for finding and fixing compressed air leaks. Participating in the program is easy and benefits include increased system capacity, reduction in energy usage and cost savings.

Step 1: Find

The first step in the program is a free compressed air leak survey, conducted by a program participating contractor. Technicians will survey your system using an ultrasonic detector and tag any leaks.

Step 2: Fix

Any discovered leaks can be fixed by you, or by a contractor. Once the leaks have been fixed, we will help you complete and submit the program application to receive your incentives. Fix incentives can also be paid directly to a participating contractor, so there are no out of pocket costs!

Benefits

- Reduced unplanned downtime
- Increased equipment lifespan
- Reduced operating costs
- Reduction of unnecessary demand on your compressed air system
- Access to a vetted network of compressed air specialists
- Access to advanced leak detection tools and methods
- Your contractor can be paid directly, there is no need to contract with a third party

Eligibility

- You must be a commercial DTE electric customer in good standing
- You do not have centrifugal compressors
- You fix at least 50% of the identified leak volume within 60 days of the completed leak survey
